

NOM :

INTERRO DE COURS – SEMAINE 4

Exercice 1 – Résoudre les équations et inéquations suivantes en donnant l'ensemble des solutions.

1. $x - 9 = -4$

2. $3x = -24$

3. $5x - 9 = 3x + 4$

4. $\frac{4}{5}x + 4 = -\frac{2}{3}$

Solution :

1. $x - 9 = -4 \iff x = -4 + 9 = 5$, donc $\mathcal{S} = \{5\}$.

2. $3x = -24 \iff x = -\frac{24}{3} = -8$, donc $\mathcal{S} = \{-8\}$.

3. $5x - 9 = 3x + 4 \iff 5x - 3x = 4 + 9 \iff 2x = 13 \iff x = \frac{13}{2}$, donc $\mathcal{S} = \left\{\frac{13}{2}\right\}$.

4. $\frac{4}{5}x + 4 = -\frac{2}{3} \iff \frac{4}{5}x = -\frac{2}{3} - 4 = -\frac{14}{3} \iff x = -\frac{14}{3} \times \frac{5}{4} = -\frac{35}{6}$, donc $\mathcal{S} = \left\{-\frac{35}{6}\right\}$.

5. $3 - 5x \leq 0$

6. $2x - 1 \geq -2x + 3$

7. $4(x - 2) - 3(6 - 2(3 - 4x)) + 3(7 - 2x) = 0$

Solution :

5. $3 - 5x \leq 0 \iff -5x \leq -3 \iff x \geq \frac{-3}{-5} = \frac{3}{5}$, donc $\mathcal{S} = \left[\frac{3}{5}, +\infty\right[$.

6. $2x - 1 \geq -2x + 3 \iff 4x \geq 4 \iff x \geq \frac{4}{4} = 1$, donc $\mathcal{S} = [1, +\infty[$.

$$7. \begin{aligned} 4(x - 2) - 3(6 - 2(3 - 4x)) + 3(7 - 2x) &= 0 \iff 4x - 8 - 3(6 - 6 + 8x) + 21 - 6x = 0 \\ \iff 4x - 8 - 24x + 21 - 6x &= 0 \iff -26x + 13 = 0 \iff -26x = -13 \iff x = \frac{-13}{-26} = \frac{1}{2}, \\ \text{donc } \mathcal{S} &= \left\{\frac{1}{2}\right\}. \end{aligned}$$
